PROFILE

Data Engineer with hands-on experience building end-to-end production style data pipelines, ELT workflows, and analytics infrastructure. Proficient in Python, SQL, dbt, Apache Airflow, Kafka, and cloud data warehousing (BigQuery, ClickHouse). Demonstrated ability to design production-style systems through portfolio projects that simulate real-world data engineering challenges

TECHNICAL SKILLS

Languages	Python, SQL
Data Engineering	Apache Kafka, Apache Airflow (Astronomer), dbt (Core), Great Expectations
Warehousing	Google BigQuery, ClickHouse, PostgreSQL
Visualisation	Metabase, Tableau, Matplotlib, Seaborn
DevOps / Infra	Docker, Docker Compose, Git, GitHub
Other	REST APIs, ETL/ELT, Data Modelling, Data Quality

PROJECTS

Real-Time Event Tracking Pipeline

github.com/Moyijo99/realtime-tracker

- Built a production-style streaming pipeline: Python/Faker producer publishes synthetic user events to Apache Kafka; a consumer service ingests events into PostgreSQL with no data loss under burst load.
- Designed an Airflow DAG to orchestrate hourly ELT from PostgreSQL into ClickHouse, preserving raw data for reprocessing and reducing analytics query latency versus direct PostgreSQL querying.
- Authored dbt staging and mart models transforming raw events into aggregated, dashboard-ready datasets; visualised results in Metabase.
- Containerised the full stack with Docker Compose (7 services: Kafka, Zookeeper, PostgreSQL, ClickHouse, Airflow, dbt, Metabase) enabling one-command local deployment.

Stack: *Python · Apache Kafka · PostgreSQL · Apache Airflow · ClickHouse · dbt · Metabase · Docker*

Abuja Weather Intelligence Pipeline

github.com/Moyijo99/weatherdata

- Engineered a batch ingestion pipeline pulling real weather data from the Open-Meteo API into Google BigQuery, with schema validation enforced via Great Expectations to catch drift before it reaches downstream models.
- Built dbt staging and mart layers on top of BigQuery, applying consistent data contracts and enabling reproducible analytics on Abuja weather trends.
- Orchestrated daily pipeline runs with Apache Airflow on Astronomer; debugged profiles.yml configuration and resolved column-level schema drift in production DAG execution.

Stack: *Python · Open-Meteo API · Google BigQuery · dbt · Apache Airflow (Astronomer) · Great Expectations*

ETL Pipeline for Sales Data Analysis

- Built an end-to-end ETL pipeline extracting sales data from CSV sources, applying Pandas transformations for aggregation and trend analysis, and loading cleaned data into PostgreSQL.
- Automated SQL-based reporting and visualised business insights in Tableau dashboards.

Stack: *Python · Pandas · SQL · PostgreSQL · Tableau*

EXPERIENCE

Data Management & Business Intelligence Intern | [Galaxy Backbone Ltd., Abuja](#) *Mar – Aug 2024*

- Managed and validated organisational datasets across systems, ensuring accuracy and consistency for downstream BI reporting.
- Supported SLA and budget analyses within the DMBI unit, using Python and SQL to automate preprocessing workflows previously handled manually in Excel.
- Collaborated with IT and network engineering teams to streamline data pipelines, improving reporting efficiency and reducing turnaround time on recurring reports.

Intern | [Griot Studios, Abuja](#) *Jan – Mar 2021*

- Assisted in data entry, digital database organisation, and documentation management for studio operations.

Intern | [Cyberlogik Solutions, Abuja](#) *Jul – Dec 2020*

- Supported data collection and internal reporting logistics, gaining early exposure to tech-driven business processes.

EDUCATION

B.Eng in Computer Engineering

Nile University of Nigeria, Abuja
